

In brief TRANSCRIPTION

- / SPEECH RECOGNITION
- / TIMED INTERVENTIONS
- / SPEAKER IDENTIFICATION
- / AUDIO-VISUAL MATERIAL
- / HIGH ACCURACY

The growing need to digitise content and produce reliable written records at a fast pace now has its solution in the Centre's transcription service. By combining the talents of professional transcribers with the latest speech-to-text technology, we can provide clients with reliable transcriptions of their audio and video files, with time-codes and speaker identification included.

The transcription service is a cost-effective solution provided by the Centre, allowing clients to focus on their project work.

“How to” guide

Using the transcription service is simple:

You provide a link that points to the location of your audio/video material, through the Translation Centre's Client Portal.

Then, select the language(s) of the media file and its duration. You can choose the priority of the task (slow, standard or urgent) and the output format in which you wish to receive the transcription.

Our committed team will take it from there, process the transcription request and convert your audio/video material into an accurate transcription file. You will be notified once your file is ready for downloading from the Client Portal.

By providing you a high-quality, timely transcription service, the Centre aims to efficiently support you in your operational activities.

YOUR ADVANTAGES

- Enhanced accessibility** - Reach a wider audience, e.g.: hearing-impaired people, or people working in noisy or open spaces who have issues processing auditory information.
- Faster work processes** - Save precious time by no longer having to manually transcribe and post-edit videos or audio-recordings.
- Highly accurate written records** - Avail of our combination of speech-recognition technology and professional transcribers to receive top quality transcriptions.
- Increased content digitisation** - Improve the indexation carried out by search engines, which are more suited to text content than to audio and video material.
